

Progress Report on Laser Spectroscopy

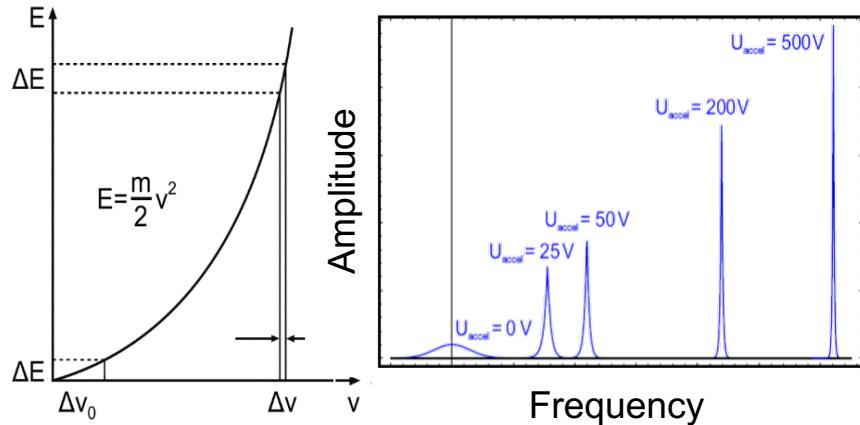

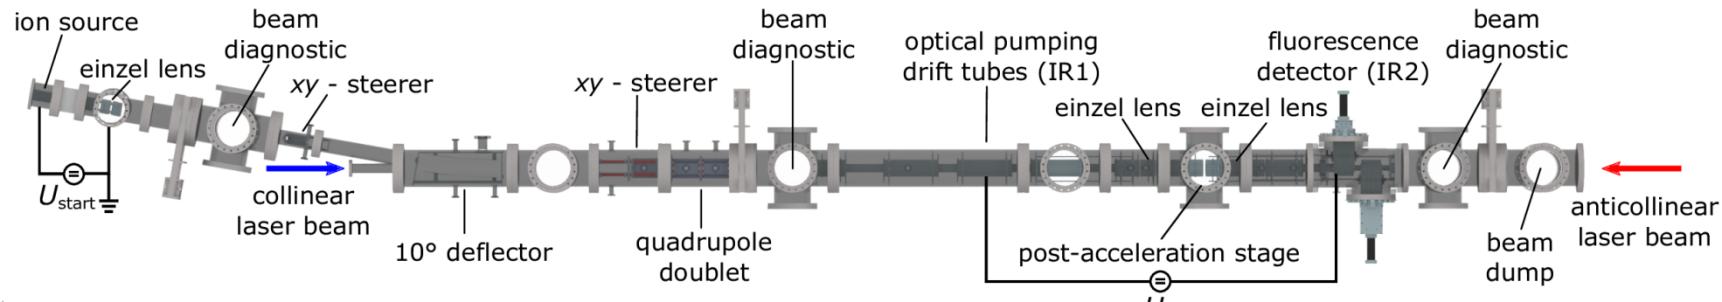

Outline

- COALA
 - Fluorescence detection region
 - Laser spectroscopy on neutral Boron
 - Helium like systems
- Argon National Lab
 - A01
- NSCL / FRIB
 - N results
 - A03
 - Iodine results

Setup

TECHNISCHE
UNIVERSITÄT
DARMSTADT

- Acceleration:
- longitudinal Doppler compression
 - high resolution

Doppler tuning

$$\nu_c = \nu_0 \cdot \gamma \cdot (1 + \beta)$$

$$\nu_a = \nu_0 \cdot \gamma \cdot (1 - \beta)$$

$$\beta = \beta(U, m).$$

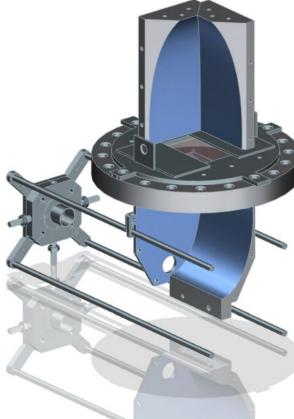

Optimization ongoing for Fluorescence detection region

A01

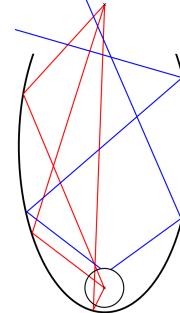

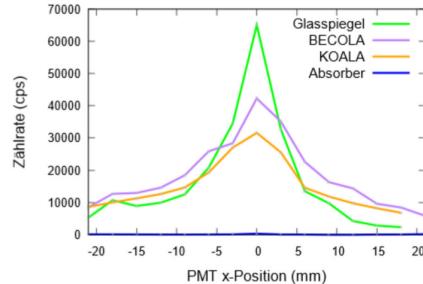

TECHNISCHE
UNIVERSITÄT
DARMSTADT

- New, high-reflective UV mirrors on 50µm glass substrates
- Increased performance in the UV
- Better shape – better focus, spatial discrimination between signal and background
- Investigating new possibilities with position-sensitive detection system
- Future implementation at KOALA, BECOLA (MSU), ANL, ...

Signal light distribution with different mirror systems

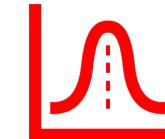

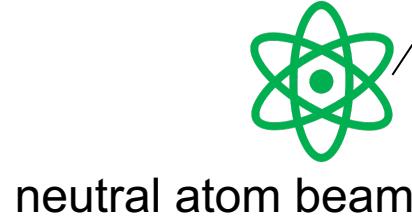

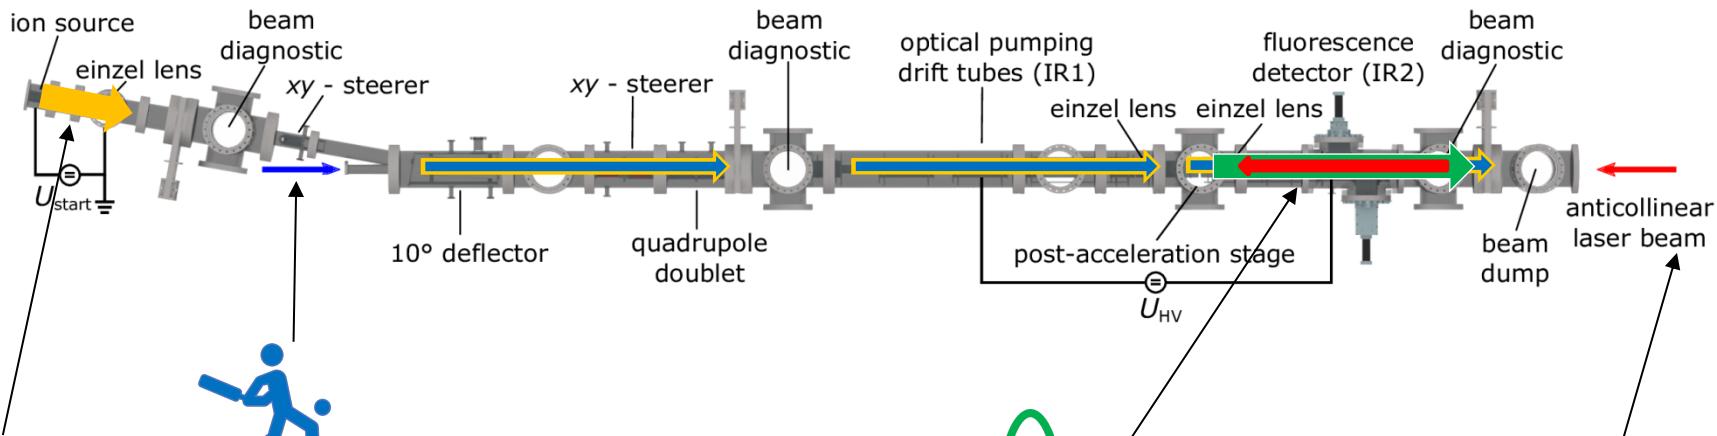

Laser Spectroscopy on neutral Boron

A01

TECHNISCHE
UNIVERSITÄT
DARMSTADT

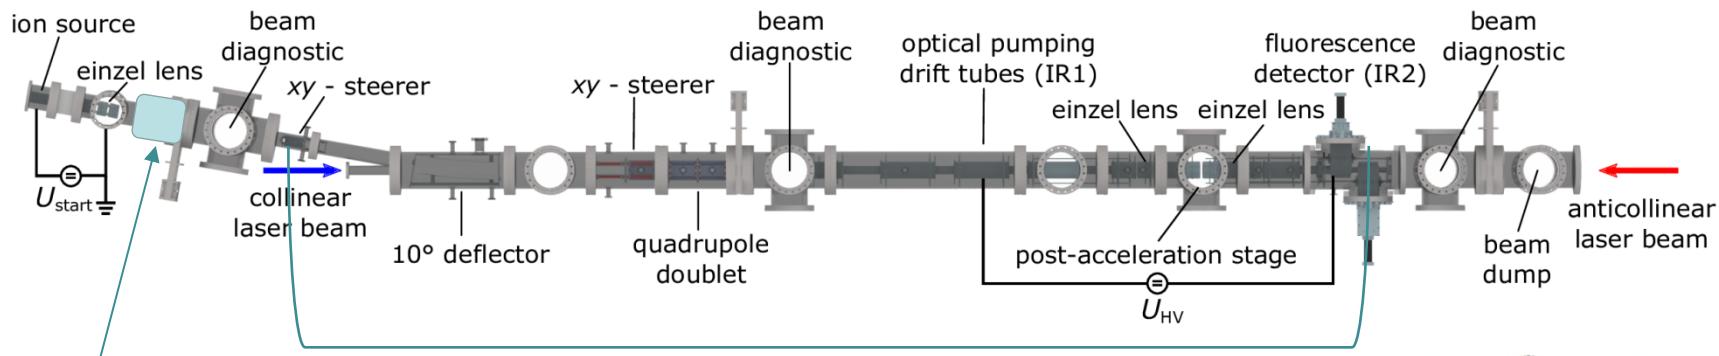

Improvements

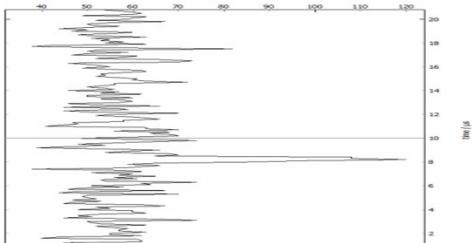

A01

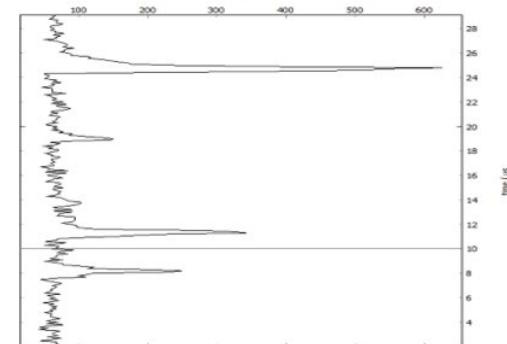

TECHNISCHE
UNIVERSITÄT
DARMSTADT

successful installation of a
Wien filter

implementation of a Time of
Flight measurement station

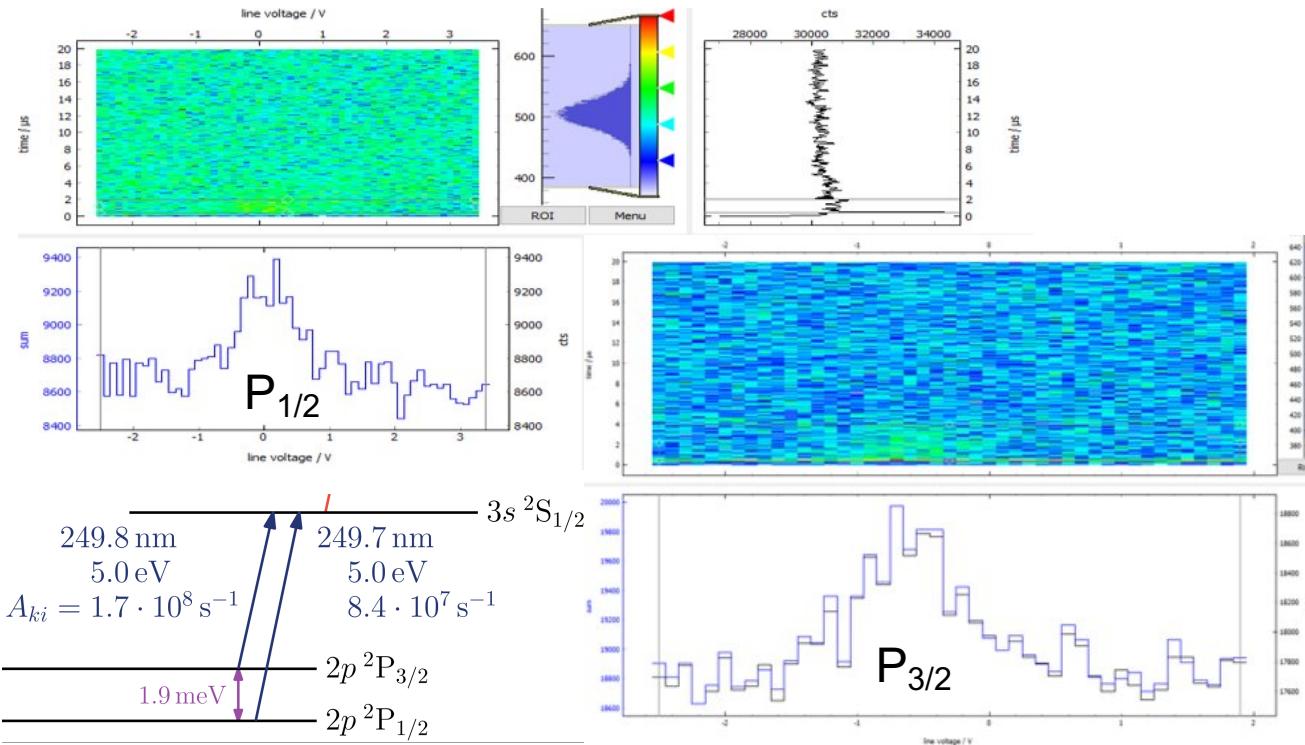

Resonance of neutral ^{11}B for $\text{P}_{1/2}$ and $\text{P}_{3/2}$ line

A01

TECHNISCHE
UNIVERSITÄT
DARMSTADT

Many opportunities for improvement, easiest:

- Higher repetition rate of neutralization laser
- Higher power of neutralization laser

Investigation of He-like ions

$$\delta\nu_{FS} = -\frac{Ze^2}{6\varepsilon_0} \Delta |\Psi_e(0)|_{i \rightarrow f}^2 \times \langle r_c^2 \rangle$$

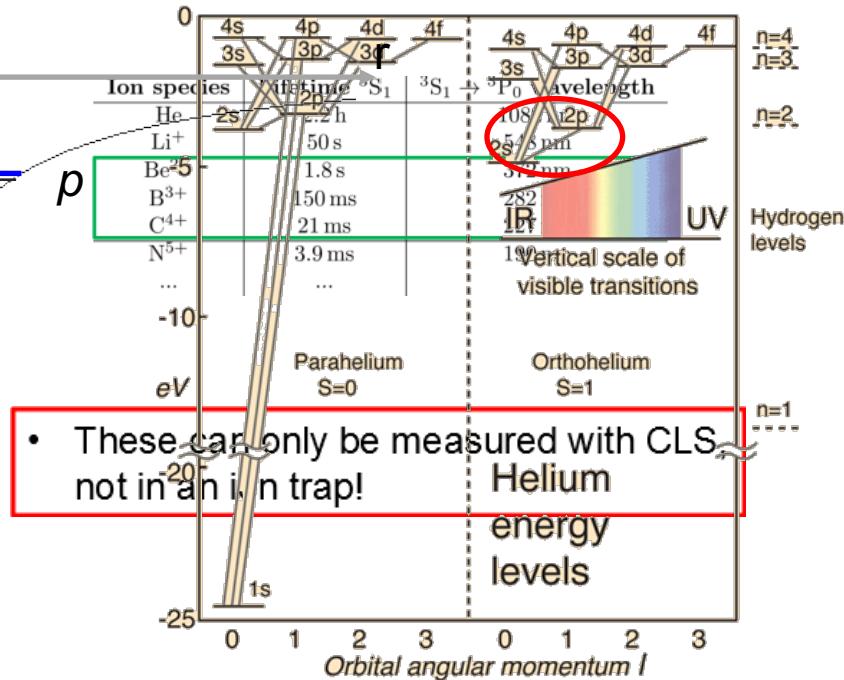

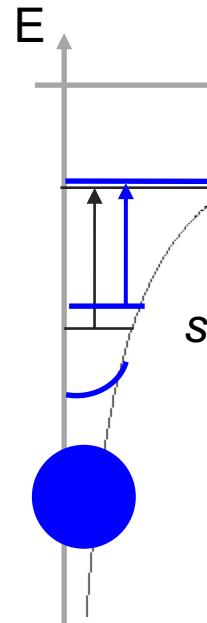

Electronic Factor
(→ Wavefunction)

$$= F_{i \rightarrow f} \langle r_c^2 \rangle$$

$$\rightarrow \nu_0 = \nu_{\text{point}} + F \times \langle r_c^2 \rangle$$

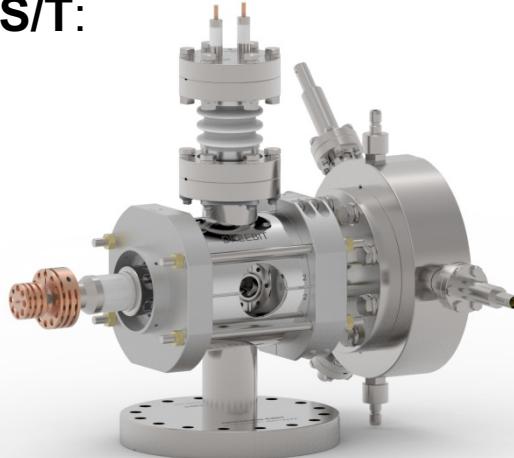

Requirements for Experiment from Theory

- Few electron system where F and ν_{point} can be calculated
→ only light He-like systems feasible

EBIS/T:

- EBIS requested by CRC:
delivered till: July 2021
- until then: prepare beamline
- Start experiment: August 2021

A01

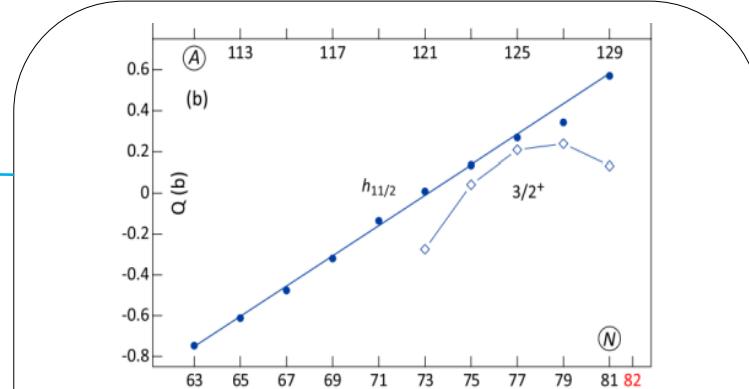

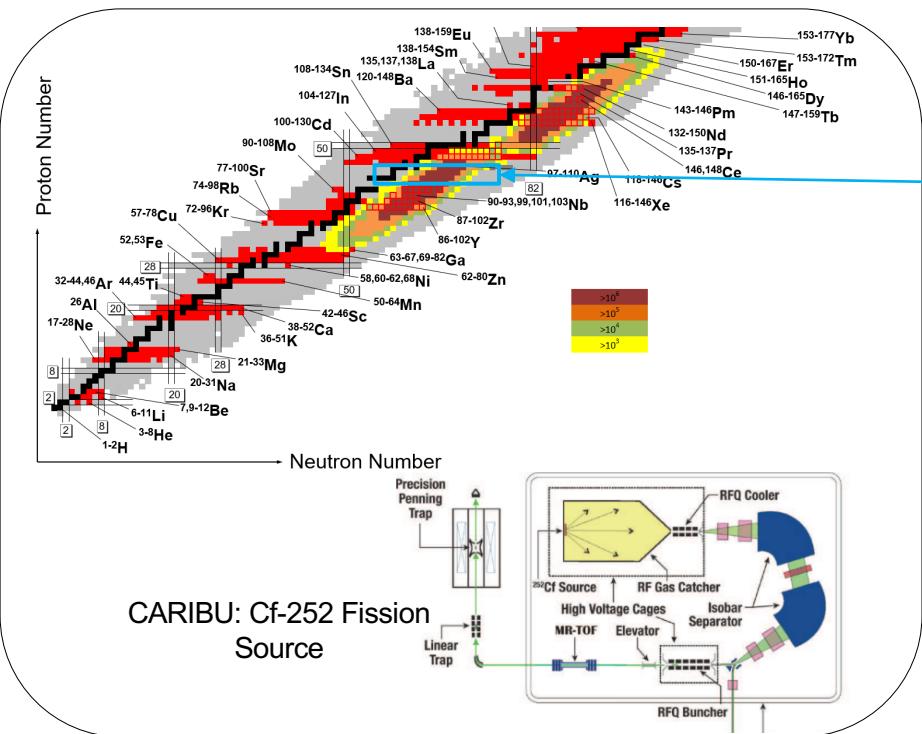

Figure 1: Quadrupole moments of the long-lived $11/2$ isomers $^{111m-119m}\text{Cd}$ (solid dots) and the $3/2^+$ states (open squares). The experimental uncertainties are smaller than the symbols. A straight line was fitted through the data points exhibiting the extremely linear behavior. A small deviation is only observed in ^{127m}Cd , which also exhibits irregular behavior in the $B(E2)$ values.

D.T. Yordanov *et al.* Phys. Rev. Lett., **110** 192501

Linear Trends in QP moments;
EM moments, Nuclear Charge Radii
In the Sn-region: Pd, Ru, Rh...

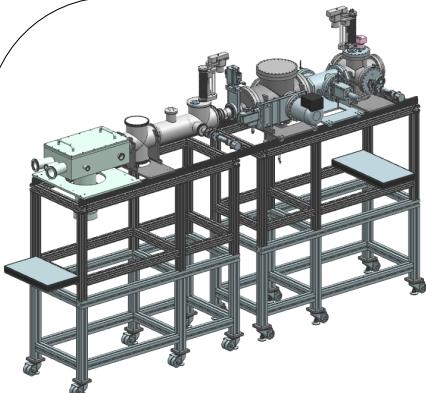

Spectroscopy on Pd: Approved by PAC

Laser spectroscopy at CARIBU

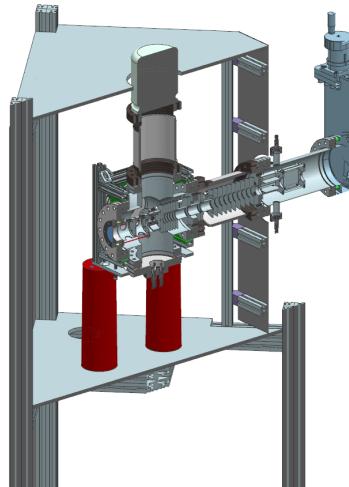

A01

TECHNISCHE
UNIVERSITÄT
DARMSTADT

- Laser Spectroscopy beam line commissioned
- New Charge Exchange Cell working (Mg + Na)
- Offline Source (almost) ready to install
- System ready at CARIBU: mid-2021

- Laser Spectroscopy System also ready for **Boron-8** in different Cave
- Investigating different (also universal) Molecule-Break-up techniques
- Test Beamtime(s) in 2021 ongoing

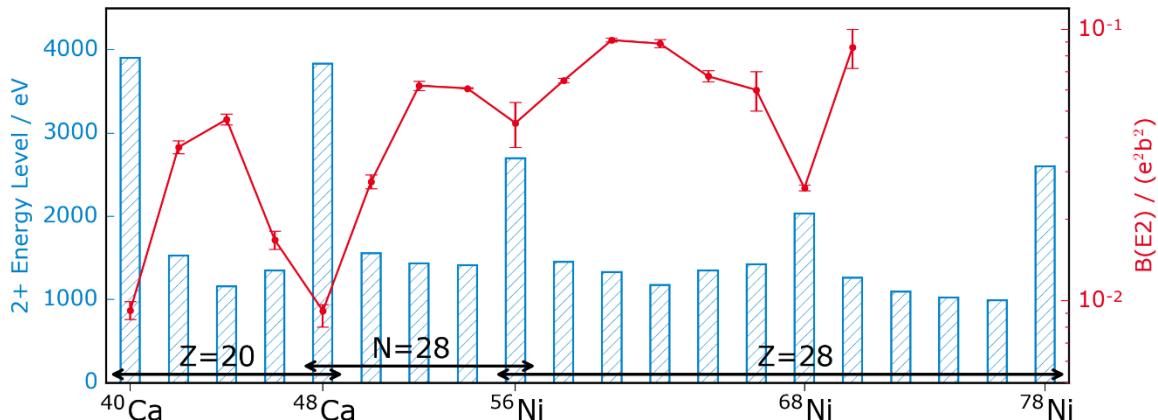

NSCL: Neutron Deficient Nickel

Darmstadt Contributions to the 2020 Corona Beamtime at NSCL

TECHNISCHE
UNIVERSITÄT
DARMSTADT

Method submitted to APB

Thank you for your attention

Achievements:

- Improved detection regions
- New measurement principle on atom beams
- King plot analysis submitted
- Nickel results in publishing progress
- Calibration on Iodine in submitted

Outlook:

- He-like Systems start in August
- Pd beamtime in preparation
