UNIVERSITÄT  
DARMSTADT

# The fate of stars

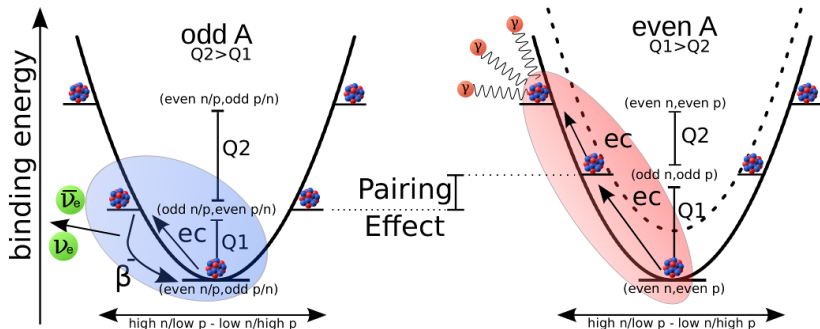

Heiko Möller, PhD Thesis (2017)

# Degenerate ONe cores

- ▶ Content after carbon burning:  $^{16}\text{O}$ ,  $^{20}\text{Ne}$ ,  $^{23}\text{Na}$ ,  $^{24}\text{Mg}$  and  $^{25}\text{Mg}$ .
- ▶ Also other nuclei from initial composition
- ▶ Mainly supported by degeneracy pressure
- ▶ Electron Fermi energy  $E_F \sim \rho^{1/3}$  increases when the core contracts
- ▶ Electron capture when  $E_F$  is larger than the  $Q$  value
- ▶ Thresholds:

Nucleus	$E_F$ [MeV]	$\rho$ [ $\text{g} \cdot \text{cm}^{-3}$ ]
$^{25}\text{Mg}$	3.833	$1.17 \times 10^9$
$^{23}\text{Na}$	4.374	$1.67 \times 10^9$
$^{24}\text{Mg}$	5.513	$3.16 \times 10^9$
$^{20}\text{Ne}$	7.026	$6.20 \times 10^9$
$^{16}\text{O}$	10.42	$1.90 \times 10^{10}$

# Urca and double electron capture processes

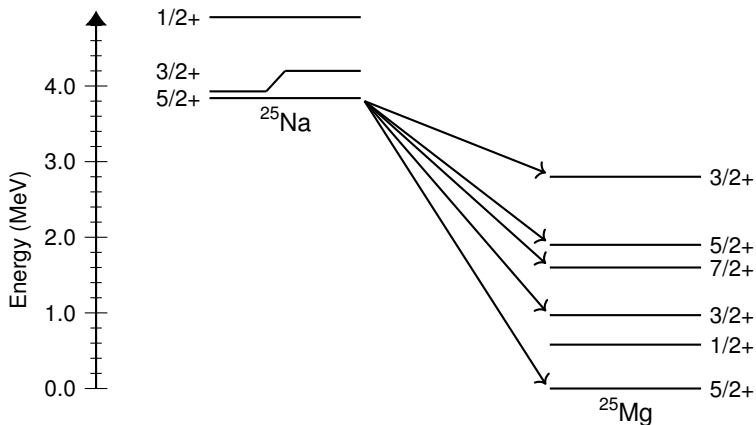

Heiko Möller, PhD Thesis (2017)

Schwab et. al, 2017.

# What transitions are relevant?

# What transitions are relevant?

# Is the Urca density affected?

- ▶ Rates for electron capture on  $^{25}\text{Mg}$  and beta decay of  $^{25}\text{Na}$  at  $\log(T) = 8.6$ :

# Adding additional transitions

- ▶ Compared with rates of Suzuki et al. (2016):

# Forbidden transition from $^{20}\text{Ne}$

- ▶ Martinez-Pinedo et al (2014): forbidden transition important for EC on  $^{20}\text{Ne}$

1+	1.057	
2+	0.0	11.163 s
$^{20}\text{F}_{11}$		$Q^-(\text{g.s.})=7024.53^8$

$\beta^-$	Log ft	
99.9913	4.9697	2+ 1633.674
<0.001	>10.5	0+ 0.0

Schwab et al. (2015)

$^{20}\text{Ne}_{10}$

## SNe Ia Keep Memory of Their Progenitor Metallicity

<sup>a</sup> Mass fraction abundance of the  $\beta$ -stable isotope in the initial ZSUN model.

# The Urca density of $^{31}\text{P}$ and $^{31}\text{Si}$

- ▶ Urca processes are important for the evolution of degenerate stellar cores
- ▶ Rates are typically determined by few transitions — analytic determination of the rates
- ▶ Accounting for initial composition of the star (metallicity) allows for additional Urca pairs that are currently being investigated
- ▶ Second forbidden transition from  $^{20}\text{Ne}$  needs to be computed
